EDUCATION

M.Sc. in Artificial Intelligence

University of Amsterdam

September 2017 – Anticipated August 2019

- GPA: 8.4/10
- Relevant Coursework:
  - Machine Learning I, II
  - Natural Language Processing, Computer Vision
  - Deep Learning, Deep Learning for Natural Language Technology

B.A. in Computer Science, Economics, and International Studies (Triple Major)

Northwestern University

September 2013 – June 2017

- GPA: 3.6/4.0
- Honour Roll (Dean's List): W 2016, S 2016, F 2016, S 2017
- Recipient of the International Student Scholarship and the UWC Davis Scholars Scholarship

EXPERIENCE

Graduate Student Researcher

Institute of Logic, Language and Computation

June 2018 – Present

Member of the i-machine-think research group at the ILLC

- Submitted papers to EMNLP 2019 and CoNLL 2019 (currently under review)

Teaching Assistant

University of Amsterdam

February 2019 – April 2019

Teaching Assistant in Information Retrieval course for the M.Sc. in Information Studies (Data Science track)

- Covered topics such as distributed crawling, Term/Semantic Search and Learning to Rank
- Supervised six groups of students to implement a search engine from scratch

Co-founder

Zcruit

February 2016 – January 2018

Zcruit is a startup which uses predictive analytics to help inform college football recruiting

- Conceptualised and brought to market a Minimum Viable Product, now sold nationwide to 35+ enterprise clients
- Developed an AWS based scalable and serverless backend architecture using Lambda, DynamoDB, SQS.
- Designed an asynchronous scraper able to refresh >50,000 individual data-points daily using minimal resources

Lead Student Developer

Northwestern Media Design

October 2015 – November 2015

Lead Student Developer for the Northwestern Media Design (formerly known as NUX)

- Developed and supervised the release of mobile applications using Ionic and Cordova frameworks

PROJECTS

M.Sc. Research Thesis

Ongoing research on language evolution, bridging the gap between traditional Linguistic theories and Deep Learning

- Simulated language evolution through Referential Games and Neural Architecture Search algorithms
- Analysed the emerged languages in a multi-agent and multi-modal setting
- Submitted an EMNLP conference paper as a result of the research (currently under review)

ECCV 2018 Workshop Paper: Adding Object Detection Skills to Visual Dialogue Agents

Published research paper at the 2018 EECV Workshop on Shortcomings in Vision and Language

- Implemented Mask R-CNN in a Visual Dialog agent to improve performance on the GuessWhat?! task
- Replaced ground truth images using our approach which allows, for the first time, inference on unlabelled images

Positional Attentive Language Modelling

Independent research project through the ILLC

- Experimented with new attention mechanisms and test on Language Modelling baselines
- Implemented state-of-the-art Sequence-to-Sequence models and surpassed baseline metrics using proposed technique

Global and Local Critical Policy Learning for Abstractive Summarization

Research project for the 2018 Information Retrieval II course.

- Replicated and surpassed state-of-the-art abstract summarisation methods by optimising ROUGE score directly instead of through standard Maximum-Likelihood-Estimation

SKILLS

Programming:

Python | Pytorch | JavaScript | NodeJS | C++

Other Technologies:

Git | AWS | Latex | Adobe Suite | Microsoft Office

Languages:

English (native), French (native), Spanish (A2)

Competitions:

Autonomous Robot Design Competition (2016 and 2017), RoboCup IranOpen 2018, Kaggle Elo Merchant Category Recommendation 2019 (**top 10%**)
